EDUCATION

Boston University, Boston, MA

09/2020-01/2026

Doctor of Philosophy (Ph.D.) in Computer Engineering

GPA: 3.91/4.00

Advisor: Douglas Densmore

Thesis: AI-driven design automation for microfluidics and multicellular systems

Research Focus: AI-enabled microfluidic CAD, formal verification, and multicellular biological system design.

University of Electronic Science and Technology of China (UESTC), Chengdu, China

09/2016-06/2020

Bachelor of Engineering in Software Engineering (*Elite program*)

GPA: 3.94/4.00 (Rank: 6/740)

Thesis: Analysis of Postoperative Applications of Pose Tracking Algorithms.

RESEARCH SUMMARY

Computer scientist developing algorithms, programming languages, and AI-driven software infrastructures for biological engineering. My research focuses on translating complex biological design problems into computational abstractions that enable optimization, automation, and scalable scientific discovery.

RESEARCH INTERESTS

- [1] Computational methods for biological engineering
- [2] Constraint-based optimization and graph algorithms for multicellular computation
- [3] AI-driven scientific design automation
- [4] Compiler and programming language design for scientific applications
- [5] Foundation models and AI agents for laboratory automation

AWARDS & HONORS

iGEM "Gold medal" (Student Mentor, wiki: https://2024.igem.wiki/bostonu/)	11/2024
China Youth Science and Technology Innovation Award (Nominated by UESTC)	05/2020
Most Outstanding Students of UESTC 2019 (成电杰出学生, 10/5000 in UESTC, 1/740 in department)	12/2019
iGEM "Gold medal" and "Best Software Project" (wiki: https://2019.igem.org/Team:UESTC-Software)	11/2019
Outstanding Graduates Award of UESTC	10/2019
"Wu Liang Ye" Enterprise Scholarship (2/740 in Software Engineering department)	09/2019

TECHNICAL SKILLS

Core Expertise: Algorithm Design, Graph Algorithms, Constraint Formalization, Scientific Software Engineering, Formal Verification, Optimization, Compiler & DSL Design, AI-assisted Scientific Computing

AI & Data Science: Graph Algorithm Library (NetworkX), ML/AI/DS Library (PyTorch, TensorFlow, NumPy)

Systems & Software: Python, C/C++, Java, TypeScript, HTML, Linux Shell, LaTeX

Biological & Microfluidic Skills: CNC Milling, Laser Cutting, Benchmark Collection and Evaluation

CAD Tools: Fusion 360, Microfluidic Devices Manual Design

RESEARCH EXPERIENCE

Research Assistant | Boston University, CIDAR lab

Boston, MA | 09/2020-Present

Supervisor: Prof. Douglas Densmore

- **Neptune — Hierarchical Microfluidic Design Automation System (CUHK collaboration)**
 - Designed a domain-specific programming language (DSL) and compiler enabling AI-assisted biological design.
 - Developed graph-based intermediate representations supporting automated optimization.
 - Built an extensible software infrastructure for end-to-end scientific design automation.
- **Oriole — Genetic Circuit Partitioning for Multicellular Computation (MIT collaboration)**
 - Developed a constraint-based graph partitioning algorithm for multicellular computation under biological and hardware constraints.
 - Formalized biological and experimental constraints into computational representations, enabling automated genetic circuit synthesis and optimization.
- **Vespa — In-silico Logic-level Constraint-based Validation for Large-scale Microfluidic Systems**
 - Developed an automated in-silico validation system for microfluidic workflows, enabling simulation-based verification and reliability testing prior to wet-lab execution.
 - Constructed benchmark datasets for future standardized evaluation.
- **Other Works**
 - Designed and fabricated modular microfluidic systems supporting multi-modal experimental workflows for studying cell–cell communication in controlled environments.
 - Built a natural language interface using large language models (Claude, GPT, Gemini, Qwen, DeepSeek) enabling users to interact with microfluidic design workflows without programming.

iGEM Team Student Mentor | BostonU (Wiki: <https://2024.igem.wiki/bostonu/>)

Boston, MA | 05-10/2024

- Led computational and software design for iGEM 2024 project, bridging biological objectives with system-level modeling and implementation.
- Mentored students in system design and problem decomposition for biological engineering workflows.

iGEM Team Member | UESTC (Wiki: <https://2019.igem.org/Team:UESTC-Software>)

Chengdu, China | 05-10/2019

- Built a cross-database sequence-to-protein mapping pipeline improving annotation between iGEM Registry and UniProt.
- Developed a ranking and filtering model improving alignment accuracy to >95% and increasing retrieval coverage by ~400%.

Student Research Internship | UCSB, Four “T”s lab

Santa Barbara, CA | 06-08/2019

Supervisor: Prof. Matthew Turk and Prof. Tobies Hollerer

- Reimplemented a state-of-the-art pose tracking algorithm for local evaluation and deployment.
- Benchmarked performance against a novel method using standardized datasets.

PROFESSIONAL SERVICES & ACTIVITIES

Mentor, EBRC Mentorship for Undergraduate and Master’s Students Program (EMUMS)	04/2025-Now
Direct Mentor, Eric Xie , Undergraduate Research Assistant, CIDAR Lab	06/2023-Now
International Workshop on Bio-Design Automation (IWBDA’25), Oral Presentation	09/2025
International Genetically Engineered Machine competition (iGEM’19, iGEM’24)	11/2019, 11/2024
Inventor/Contributor, Patent: Agricultural Heavy Metal Biosensor-Integrated Device	05-11/2024
Student Mentor of iGEM team: BostonU	04-10/2024
Chicago BioEngineering Conference (CBEC’24)	09/2024
Teaching Assistant, EC504: Advanced Data Structures and Algorithms , Boston University	01-05/2022, 01-05/2023
Engineering Biology Research Consortium (EBRC’23)	06/2023
International Workshop on Bio-Design Automation (IWBDA’22), Poster Presentation	10/2022
